PRODUCT

PRODUCT INFORMATION

IR120CP.1

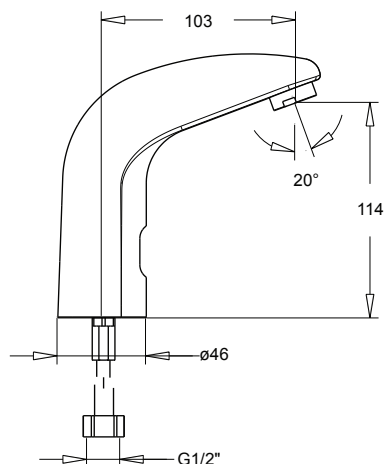

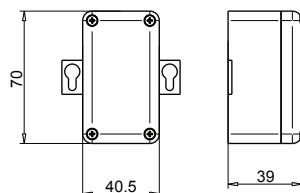

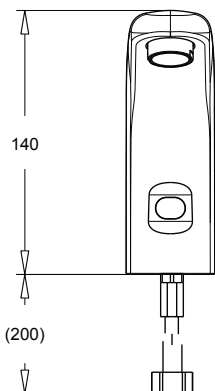

Infra red contemporary basin mounted tap - battery operated

IR121CP.1

Infra red contemporary basin mounted tap - mains operated

SPECIFICATIONS

Battery life approx 4 years with 150 operations per day
Minimum operating pressure 1.0 bar (dynamic)
Maximum operating pressure 80.0 bar (static)
Max inlet temperature 65 C
6 Ltr p/m flow regulator option available
Max basin thickness 26mm
Auto self closing preventing water wastage
24 hour anti stagnation flush cycle
Copper inlet connection
Pre-set sensor range
Infra red contactless operation
Recommended for use with a TMV mixing valve

Delivering water without contact with the tap is an ideal solution where hygiene and water economy is paramount, such as public toilets and washrooms. The tap is operated by the presence of the users hands being detected in front of the sensor, which activates a solenoid valve and delivers water. When the users hands are removed, the sensor closes the solenoid and the water is stopped immediately to prevent water waste. This tap has been designed for use with an approved Inta thermostatic mixing valve.
